

Groups Attending

- Moffstation
- Impstation
- Euphoria
- Afterlight
- Frontier
- Starlight
- Cosmatic Drift
- Delta-V
- Stellar
- Den
- Ex/Current Wizden
- RMC (observing)
- Macrocosm (Imp, Funky, Den shared upstream)

Slides:  Engine Forking Discussion

(Probably just going to take notes on the slides unless it fills up fully- moved everything fully to this document since it seems like the slides were not properly being synced)

Date: May 3, 2026

Minutes taken by aquif (aka dffdff2423, 551544963201105931)

Meeting chaired by Taydo (280450694060965889)

Topics

Why are we meeting

- Most engine maintainers have quit or are inactive
- Try and find a stable solution for upstream
- Improve the engine as whole
- Frustrations in regards to how things get merged
- A lot of this was discussed in the previous section, see minutes

Why is this meeting worth our time

- Downstreams have no control over what is happening at the moment
- We need to plan for the worst possible outcome- you can't pull something out of nowhere
- Therefore we need a backup
- We need to decide on what happens if Auth/Engine/Hub/etc is pulled off the internet

- A wizen-like should only exist if all the downstreams are in support of it
- Downstreams probably should already have had an interest in auth stuff.
- Some forks would like to have a say in how the hub is run
- People are going to be coming and going regardless and we need to make the project resistant to it.

Recap of current events

- After the first admin walkout (CE, Nair, Skarlet, et al) development stalled due to burn out and lack of interest.
- A few months later Wizards Leadership took major decisions in terms of the codebase which violated Wizards policy
 - This resulted in even more burnout from the maintainer team
- Shortly after this a letter was created to Wizard's leadership requesting charges in organization structure
- Upper wizen leadership stepped away from the project until Yesterday
- After coming back a large amount of Space Wizards developers and Admins were banned from the server for signing the above letter

Current Situation

- Auth, and Wizards CDN should be online for the immediate future
- Almost all of the developers and admins are no longer with wizards den
- Plan for key hand off is unfinished at the moment
 - Likely going to put one person forward temporarily
 - Hardcap of a year
 - Content repo will have PRs disabled
 - Multiple keyholders will be worked out at some point

Moving Forward

- Wizen wants the engine to be better documented and people will be provided with coaching regarding development.
- Wizard's goal is to bring in new blood and see what old blood would be willing to come back after an infra handoff
- **Don't move forward too bad and plan for the worst but hope for the best**
- RT is a great engine and it would be amazing if we could make it a general purpose engine.

Nulllink?

- Starlight's system for syncing bans

- It can sync bans/roles/etc between Discord, GH, Game servers
- Ask starlight devs for more info (Rinary/Darkrell)

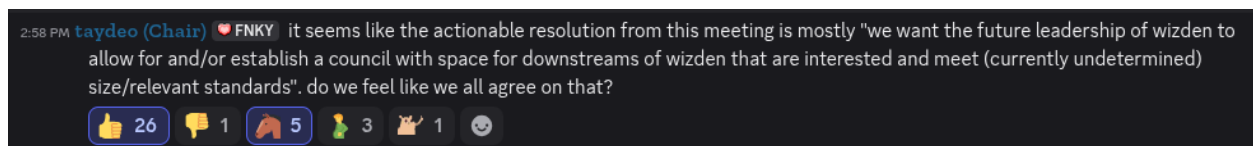

Forking Resources

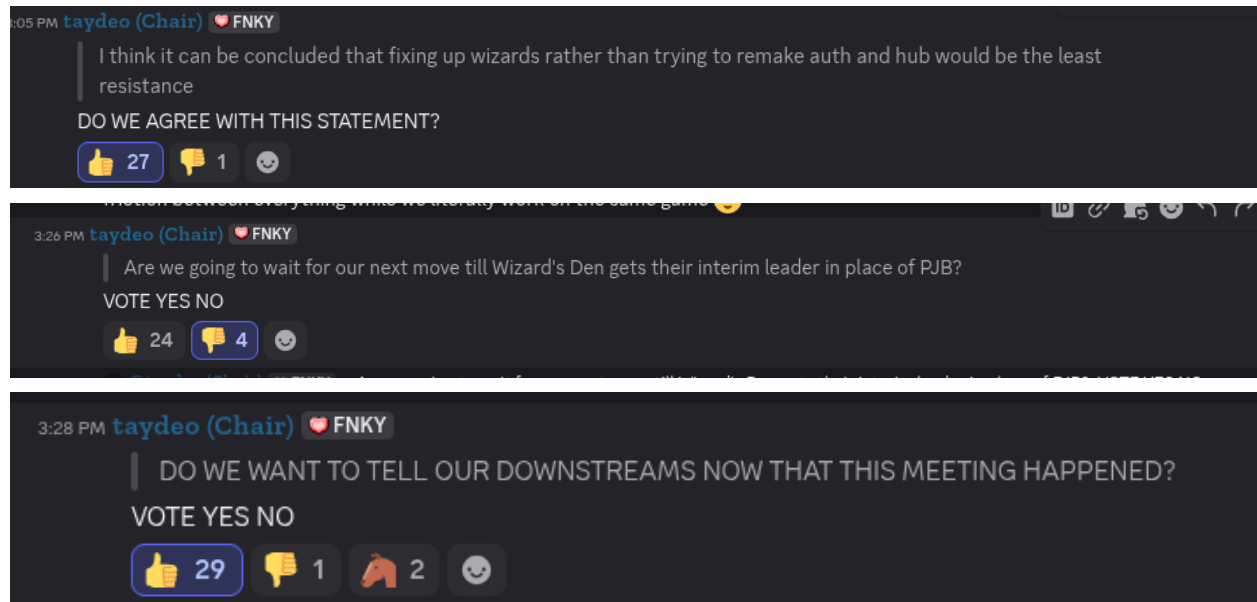

- If we fork RT we are basically committing to maintaining a new game from scratch and there is no way around it
- Engine overview:
 - All downstreams are a content bundle which is run by the RT engine in a sandbox. RT is distributed by wizden.
 - Engine is security critical
- The community is large. We can probably manage an engine fork but it would just be a lot of work
- Bare minimum you can distribute the engine yourself if you need to
 - You would be responsible for your own security if you do this

Governance

- A lot of forks want to be fully involved in the engine- it should not just be a single upstream
- Possible council structure where every server sends a rep.
 - Delta-V has a structure where nobody is able to fully burn down the project. Could be a model to use.
 - This Council needs to be independent of forks
 - Needs to be easy for keyholders to walk away
 - Needs more discussion, too much for today
 - It is hard to have an actual council without a benevolent dictator over them
 - How do we stop the council from impeding development?
 - One person should not be able to remove staff
- We need a fallback no matter what. No single person should be able to turn off space station.
- We need a solution for forks to error their grievances against upstream in a way that will actually be handled.

Votes:

Statement authorized for release:

We as stakeholders in the wider Space Station 14 ecosystem hold that:

1. We prefer for the needed authority and keys to be transferred to a new standing team, comprised of both current and returning members, and we will find ways to support that new team if it is formed.
2. We recognize the difficulty in doing a hard engine and platform fork, but commit to collaborating to do this if needed for the survival and benefit of all our servers.
3. We recognize that this has exposed a large risk to the project, and we commit to future collaboration to make it easier in the future to make sure that Wizden, or a future central service/hub, cannot be a single point of failure, and existential risk to the project, going forwards.

Future votes: Wizden's deadline for a transfer of roles, When do we release the minutes
